Good morning teachers and fellow students.

Today josh jovan and I will be talking about diabetes. What is diabetes? Is a chronic disease with serious complications currently affecting an estimated 1.8 million Australians.

About 275 adults develop diabetes every day, in 2010 close to four million deaths in the 20 to 79 age group.

There are two types of diabetes; type 1 one and type two. Type one means that a person doesn’t have enough sugar in their body as their pancreas isn’t making enough insulin.

Whilst, type two means that a person has more than enough insulin, therefore, if they eat a lot of sugar their health will be severely affected. For example, they can lose their eye sight.

Diabetes week is an initiative to raise awareness about diabetes type 1. Therefore, we would like to help with this initiative by selling jelly beans and jelly babies at the athletics tomorrow. Each of these bags will cost one dollar and all money raised will be donated to diabetes Australia.

Please support us in raising awareness and money for diabetes.
